Washington, D.C. 20054  
Delivered by e-mail

I am attaching a copy of our tariff filed with the California Public Utilities Commission.. It should better help you understand the landline services we will be providing. In addition, I am attaching some facilities diagrams to further explain the network layout.

Our connection to the Public Switched Telephone Network and the internet will be in Ventura. We will be connecting to the islands by satellite. There will be one main base station on each island. We will then be connecting to each location by wireless local loops or by copper facilities. Some locations will have single telephone lines where the ranger stations and the housing complexes will have multiple ones. The mobile wireless aspect of the project is a small aspect of it. We plan to deploy payphones with mini-pico cels at camp sites to allow campers to use their cel phones in addition to the landline payphone.

Assuming the FCC grants us ILEC status, we plan to deploying within six months of approval.

We look forward to discussing this with you next week.

Thank you for your courtesy and cooperation.

Sincerely,

Todd Lesser  
President  
Channel Islands Telephone Company
